"Do nothing out of selfish ambition or vain conceit, but in humility consider others better than yourselves." - Philippians 2:3

POLLUTION!!!

Progress is good, but sometimes it comes with consequences.

Bangkok, being the center of technological and commercial development of Thailand, enjoys economic success and has been overtaking other cities not only in Southeast Asia but also in some other Asian countries in terms of economic growth.

Construction of infrastructure, such as roads, other public transportation routes, sprouting of establishments, and factories working in extended time came as a result of the economic success.

While everyone is enjoying the perks of this kind of progress, a haunting problem evolved in the shadows of Bangkok. Yes, pollution is a serious threat to all developing and developed countries. As proof, the government was forced to advise schools in most parts of Bangkok to shut down for few days as a precautionary measure for the intensifying air pollution problem brought by factories, cars and the ongoing road and other public transportation route constructions. As a result, students missed their classes in most schools in Bangkok. And RAIS was not spared as students missed two days of classes.

Pollution certainly has many causes and requires different approaches for it to be solved. One of the most effective, and yet always forgotten solution and prevention, starts within us. Self-discipline, indeed, can help us in times like this. Simple ways such as throwing trash properly and saving electrical energy can help minimize the effect of pollution. Discipline, coupled with proper education, can be the perfect remedy in combating not only this kind of problem but any obstacle that we will be facing.

By: Teacher Aldo

The pre-school fieldtrip on February 22, 2019 was enjoyed by all classes from K1-K3. The students had so much fun doing all the activities and seeing interesting things in the farm, amusement center, and museum.

The K3 students enjoyed their Mini Murrah Farm experience making their own ice cream, and baking their own pizza. Moreover, seeing all the animals and feeding them. The K2 students enjoyed the exciting rides and fun activities with friends in YoYo Land. Surely, that place was filled with laughter. The K1 students stretched their imagination as they were hooked in feeding robotic dinosaurs and learning about their fossils.

It was indeed a well-spent time with friends and an exciting day for everyone especially for the students who joined the trip.
